Introduction

Flokispin (\$FKS) is a blockchain-based decentralized gaming platform on the Ethereum chain that allows users to earn more \$FKS tokens for playing a spinning wheel. Based on blockchain technology, our development team has developed a unique solution that allows anyone to earn \$FKS tokens without requiring technical knowledge.

The spin mechanism increases the potential rewards earned over time by introducing an element of chance into the equation. It also reduces the risk of minting new tokens and reduces the chance of a person receiving the same number of tokens multiple times. A user of the platform plays the Flokispin game by spinning a wheel to win more tokens.

As the spin mechanism works similarly to a lottery, there is no guaranteed outcome every time the wheel is spun. The \$FKS tokens would be tradable on Uniswap and other centralized exchanges to allow users the flexibility to choose how they want to spend their winnings.

Our Mission

Our goal is to introduce a fun new way to earn crypto tokens and encourage new users to join the blockchain community. We believe that by introducing a fun and easy way of earning cryptocurrency, we can help to expand the adoption of blockchain technology among the general public.

We have also implemented measures to ensure that the tokens earned through spin are not subject to manipulation and can be used to trade or sell at market price without any restriction. We offer a high level of security to protect the interests of our users and we conduct regular audits to ensure that our processes meet the highest industry standards.

We included a referral feature in the Dapp that allows anyone to refer their friends and earn \$FKS tokens from their friend's spin play. We believe in building a solid community of loyal supporters. As a reward for being a loyal supporter, we reward our community with up to 10% cashback in \$FKS tokens used to play by those they referred. Anyone who refers more people also gets an increased amount of cashback in their referral earnings.

Flokispin (\$FKS) is designed to be 100% fair and transparent because it's decentralized no one has full control over it, so the price of FlokiSpin can not be manipulated. It is a game that benefits both players and businesses alike while rewarding loyalty at the same time.

Why Flokispin

We implemented an element of chance into Defi to reward the community. It works more like a lottery. We are pretty sure that this is a new concept in web3. Our basic idea is to create a gamify mechanism that is fun and easy through a decentralized platform where everyone can earn rewards by spinning the wheel.

The problem we are trying to solve is quite basic. Over the year, we noticed how cryptocurrency adoption has grown with a large technological advance but despite the large adoption only 40% or less of the world population has adopted cryptocurrency completely. A few numbers of the remaining 60% might be finding it difficult to understand the concept of cryptocurrency, or some might regard it as a Ponzi scheme.

We are bridging this gap by integrating a mechanism that is related to both web2 and web3 and picking new adopters up with a concept they can easily understand which we keep developing our phase 2 roadmap is to introduce our NFT called the Flokispin SKOL NFTs where our users would be able to gain access to unlimited spin on the spin Dapp without using their \$FKS tokens to spin. With our SKOL NFT, you do not need any \$FKS tokens to play the spin game, you can also use the Flokispin SKOL NFTs to play spin and earn more tokens.

Use cases (core values)

 flokispin

WHITE PAPER

1

Community Driven

The Flokispin 100% community driven, we would keep growing the community organically to achieve a community of true vikings in order to sail smoothly.

The community is the heart and soul of Flokispin.

2

Huge Burn Mechanism

The spin is designed to acquire \$FKS tokens used to play spin, where 50% of the daily spin tokens accrued in the daily spin vault is burnt, and the other 50% is transferred to the spin vault for reward and long sustainability.

The burn is done every 24hrs

3

Liquidity Pool Regeneration

A certain percentage (2%) from buy and sell tax is used to pair BNB to generate LP token in order to increase the initial liquidity pool on launch

Flokispin users and holders will be long term benefactors of the pool as the price increases overtime.

How Does this Mechanism Works?

WHITE PAPER

To play the spin game you need to buy some FKS tokens from Uniswap. The player places a preferred amount of their \$FKS tokens to play spin, which can result in doubling (2x) the amount depending on the outcome of the spin. The outcome is 100% random. The spin result is multiplied by the amount of \$FKS tokens a player uses to play.

Then the reward is distributed to the player. The spin protocol is designed to have two spin vaults which are the daily spin vault and the regular spin vault. The daily spin vault receives all the FKS tokens used to spin within 24 hours, then in the process of sending rewards to players which happens every 24 hours, 50% of the tokens in the daily spin vault are burnt and the remaining 50% is sent to the regular spin vault for spin rewards.

So from the client side, all you have to do is buy some FKS tokens, connect your wallet to the Dapp, enter the amount you want to use to play, and then click spin. After your transaction is approved by Metamask and it's successful, the wheel is triggered and you would see your result. You can also head over to your dashboard to see your balance and spin history.

What makes us different from our competitors is that we are not only focused on the development of the token, but we also integrated it with our utility. With Flokispin, we aim to provide our users with one of the best utilities in the crypto space. In the long run, we plan to implement the Flokispin SKOL NFT, which gives users the ability to spin without the use of their tokens, in this case, the tokens you earned would serve as a bonus for playing the games. So, depending on the rarity of your SKOL NFTs would determine the number of times you can spin in a day.

Roadmap

 **WHITE PAPER**

Feb 4th, 2023

Flokispin is Launched

Flokispin smart contract was deployed and stealth launched on pancakeswap

Feb 12th, 2023

First Spin and Win Reward Distributed

Flokispin's full functional Spin and Win Dapp goes live.

Feb 11th, 2023

Flokispin Dapp is Live

Flokispin's full functional Spin and Win Dapp goes live.

Mid-March, 2023

Trade Extension

Flokispin launch on Uniswap

May 10th, 2023

NFT Development

Flokispin NFT (Skol)

June, 2023

V2 Marketing

Flokispin v2 marketing

TBA

Phase two

Flokispin phase 2 development
